# Repository

---

## Spring Data JPA

Persist data in SQL stores with Java Persistence API using Spring Data and Hibernate.

## Rest Repositories

Exposing Spring Data repositories over REST via Spring Data REST.

```
@CrossOrigin("http://localhost:4200")  
public interface ShoppingCartRepository extends CrudRepository<ShoppingCart, Long> {
```

Spring Data REST will scan the project for CRUDRepository (or JpaRepository)

Expose REST APIs for each entity type for CRUDRepository

By default, Spring Data REST will create endpoints based on entity type

# Service Discovery - Eureka

---

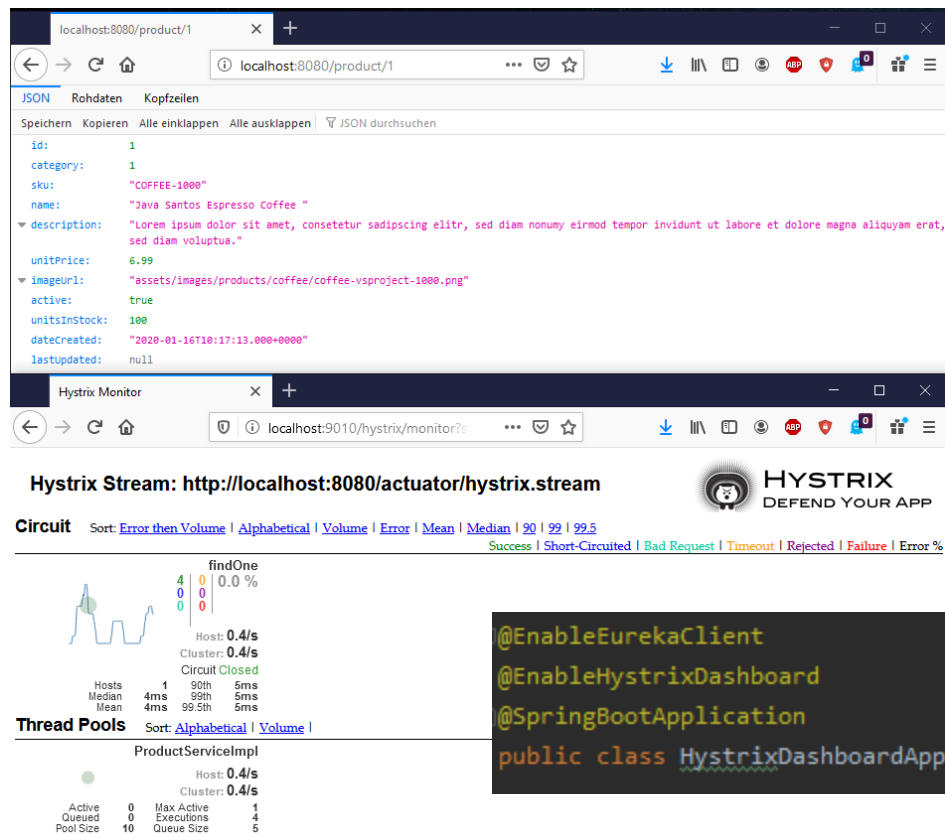

```
@EnableEurekaServer
@SpringBootApplication
public class EurekaServerApplication {
```

AWS Service registry for resilient mid-tier load balancing and failover.

## Instances currently registered with Eureka

Application	AMIs	Availability Zones	Status
HYSTRIX-DASHBOARD	n/a (1)	(1)	UP (1) - host.docker.internal:Hystrix-Dashboard:9010
PRODUCT-SERVICE	n/a (1)	(1)	UP (1) - host.docker.internal:Product-service:8080
SHOPPINGCART-SERVICE	n/a (1)	(1)	UP (1) - host.docker.internal:ShoppingCart-Service:8082
USER-SERVICE	n/a (1)	(1)	UP (1) - host.docker.internal:User-Service:8083

# Hystrix

Hystrix is a library developed by Netflix. It is a fault tolerance library and is used as strategy against failures in a service-layer.

Hystrix can be used in situations where the application depends on remote services. In case one or more remote services are down we can handle the situation by using a circuit breaker in the application.

```
@EnableEurekaClient
@EnableHystrixDashboard
@SpringBootApplication
public class HystrixDashboardApplication {
```

# Spring Controller

---

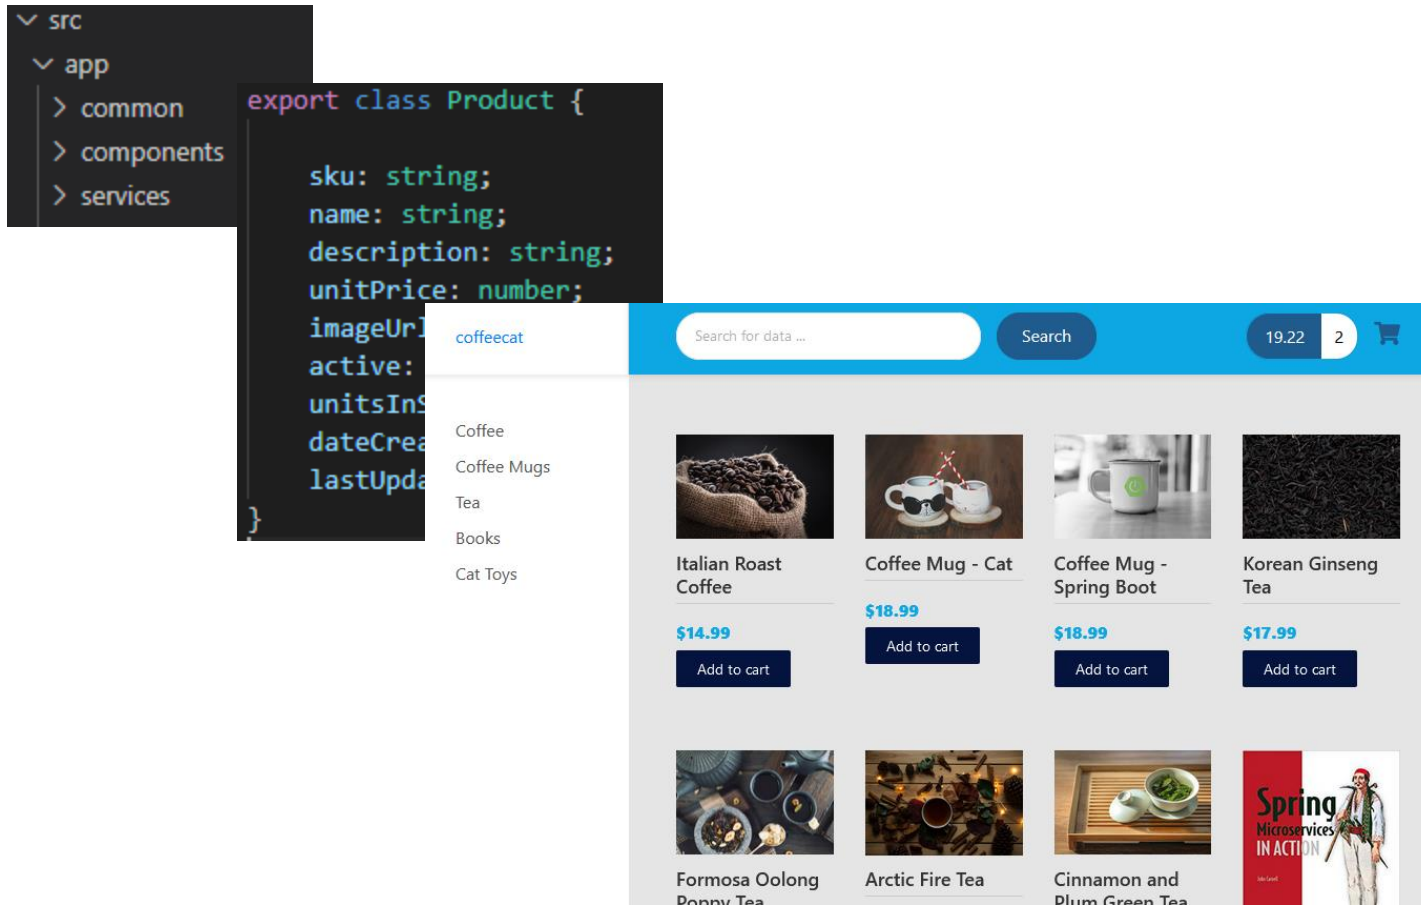

```
@PutMapping
public ResponseEntity<User> updateUser(@RequestBody User user) { return userService.updateUser(user); }

@CrossOrigin("http://localhost:4200")
@PostMapping("/shoppingcart/{userid}/{productid}/{amount}")
public void createShoppingCart(@PathVariable(value = "userid") Long userid, @PathVariable(value = "productid") Long productid, @PathVariable(value = "amount") Long amount) {
    userService.addShoppingCartEntry(userid, productid, amount);
}
```

PostMapping

PutMapping

# Frontend - Angular

Angular **Service** to call REST APIs

TypeScript **Class** for the entities

Angular **Components** for display

-> CrossOrigin Support : web browsers will not allow (java) script code to call APIs not on same origin (same origin policy)

# CoffeeCat OnlineShop

THANK YOU FOR  
YOUR KIND  
ATTENTION
